"A molecular approach to bryophyte systematics.";

"A molecular approach to bryophyte systematics.";

"Submitted (NOV-1999) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).

-I- FUNCTION: With S5 and S12 plays an important role in translational accuracy (By similarity).

-I- SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5.

The interaction surface between S4 and S5 is involved in control of translational fidelity (By similarity).

-I- SUBCELLUIAR LOCATION: Chloroplast.

-I- SUBCELLUIAR LOCATION: Chloroplast.

-I- SIMILARITY: Belongs to the S4P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. Cryptogam. Bryol. 23:191-207(2002).

-!- FUNCTION: One of the primary rRNA binding proteins, it binds
directly to los rRNA where it nucleates assembly of the body of
the 30S subunit (By similarity).

-!- FUNCTION: With S5 and S12 plays an important role in translational
accuracy (By similarity).

-!- FUNCTION: With S5 and S12 plays an important role in translational
coloracy (By similarity).

-!- FUNCTION: With S5 and S12 plays an important role in translational
coloracy (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
Submitted (JUN-1996) to the EMBL/GenBank/DDBJ databases.
--- CATALYTIC ACTIVITY: Orotidine 5'-phosphate = UMP + CO(2).
--- PATHWAY: Pyrimidine biosynthesis; sixth (last) step.
--- SUBUNIT: Homodimer (by similarity).
---- SIMILARITY: Belongs to the OMP decarboxylase family. Subfamily 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Cates A.C., Wollberg P., Achen M.G., Wilks A.F.;

Sampling the genomic pool of protein tyrosine kinase genes using the grampling treation with genomic DNA.";

Biochem. Biophys. Res. Commun. 249:660-667(1998).

-! FUNCTION: Essential for correct eye morphogenesis (ommatidial R7 neuron formation), this requires the Rasi/MAPK signal transduction pathway. May be involved in the regulaton of cytoskeleton organization and cell-cell contacts in developing ommatidia.

C-!- CATALITIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine phosphate.

C-!- TISSUE SPECIFICITY: Ubiquitous in early embryos, in stages 13-16 and ventral ganglions. In larvae, expression is seen in visceral mesoderm, hindput, brain, anal pads and ventral ganglions. In larvae, expression is in CNS, wing disk, leg disk and photoreceptor precursors in the eye-antenna disks obstension increases during embryos expression is very low, expression increases during embryos expression is very low, controlled and pupped.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                  Sequence 6, Application US/09941314

Patent No. US20020142396A1

GENERAL INVENDENCY

TITLE OF INVENTION:
TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use to
TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein
FILE REFERENCE: 2009-081PC

CURRENT FILING DATE: 2001-08-29

PRIOR APPLICATION NUMBER: 60/230,230

PRIOR PAPLICATION NUMBER: 60/230,230

PRIOR PLING DATE: 2001-09-01

NUMBER OF SEQ ID NOS: 19

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 6

LENGTH: 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match 91.8%; Score 101; DB 9; Length 36; Best Local Similarity 100.0%; Pred. The present invention relates to novel single exon nucleic acid probes used parts of the present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative inflammatory disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part directly from WIPO at the was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel single exon nucleic acid probe used to measuring gene expression in a human breast.
                                                                              Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                Peptide #1515 encoded by probe for measuring breast gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             91.8%; Score 101; DB 4; Length 50; 100.0%; Pred. bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                  Human brain expressed single exon probe encoded protein SEQ ID NO: 26976.
                                                                                                                                                                                                                                                                                                                                                                                                Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer.

The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG793910 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent dose not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gарв
                                                                                                                                                                                                                                                                                                  Human; liver; cirrhosis; hyperlipoproteinaemia; hyperlipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 50;

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed second in the present of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                     New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein #1523 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                       By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                       measuring human gene expression in a sample derived from human heart (see MARALISS-ABA4130). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays.
                                  Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human
                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                      The present invention relates to single exon nucleic acid probes for

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of ganomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide information from genomic sequence. The present sequence is a peptide sequence data for this patent did not form part of the invention. Note: The specification, but was obtained in electronic format directly from WIPO
                                                                                                New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; microarray; single exon probe; gene expression; breast; disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide #1564 encoded by breast cell single exon nucleic acid probe.
                                                                                                                                                                             Claim 27; SEQ ID NO 15357; 327pp + Sequence Listing; English.
                                                                                                                                       comprises number of single exon nucleic acid probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placents. The probes are useful for antenatal disgnosis of

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human feetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          n genome-derived single exon nucleic acid probes useful for analyzing expression in human fetal liver.
                                                                                                                                                                                               Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                              Peptide #1592 encoded by human foetal liver single exon probe.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide #1530 encoded by probe for measuring cervical gene expression.

Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted resproduction in humans and in animals. Anti-(1) antibodies are useful to screen biological samples like blood, urine, salivar, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large quantities of Zcys8 green in a biological sample and Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (1) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and copy number changes, insertions, deletions, restriction site changes and copy number changes insertions.
                                                                                                                               ö
copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.

```

```
The invention describes an isolated mammalian cystatin-8 (Zcys8)

polypeptide (I). (I) is useful for: inhibiting cancer procoagulant

protein in an individual and thus inhibiting the thrombotic events

associated with cancer; promoting spermatogenesis, modulating seminal

fluid viscosity, enhancing viability of cryopreserved sperm, sperm

motility and fertilisation; and as antigenic peptides to generate

antibodies. Zcys8 is useful as research reagent for characterising sites

of interaction between Zcys8 and its receptor. Zcys8 is useful in

chancing fertilisation during assisted reproduction in humans and in

animals. Anti-(I) antibodies are useful to screen biological samples like

blood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, itssue biopsy and autopsy material in vitro for the

chood, urine, saliva, itssue biopsy and autopsy material.

Choopses of Zcys8 gene in a biological sample and Zcys8 genes.

The polynucleotide encoding (I) is useful to detect and co localise the

coligonucleotide encoding (I) is useful in determining whether a subject's

chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene

copy number changes, insertions, deletions, restriction site changes and

rearrangements and genetic alterations that inactivate the Zcys8 gene.

This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                              Gaps

The invention describes an isolated mammalian cystatin-8 (Zcy88)

polypeptide (I). (I) is useful for: inhibiting cancer procoagulant
protein in an individual and thus inhibiting the thrombotic events
sasociated with cancer; promoting spermatogenesis, modulating seminal
fluid viscosity, enhancing viability of cryopreserved sperm, sperm
motility and fertilisation; and as antigenic peptides to generate
contibodies. Zcy88 is useful as receptor. Zcy88 is useful in
entibodies. Zcy88 is useful as receptor. Zcy88 is useful in
enhancing fertilisation during assisted reproduction in humans and in
enhancing fertilisation during assisted reproduction in humans and in
contantine Anti-(I) antibodies are useful to screen biological samples like
blood, urine, saliva, tissue biopsy and autopsy material in vitro for the
presence of Zcy88. The antibodies are also useful to isolate large
cyantities of Zcy88 protein and DNA sequences that encode Zcy88 genes.
The polymucleotide encoding (I) is useful to detect and to localise the
expression of a Zcy88 gene in a biological sample and Zcy88
                                                                                                                                                                                                                                                                                                                            ö
quantities of Zcy88 protein and DNA sequences that encode Zcy88 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcy88 gene in a biological sample and Zcy88 oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcy88 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcy88 gene. This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cystatin-8; Zcys8; cancer; procoagulant protein; thrombosis; spermatogenesis; seminal fluid viscosity; cryopreserved sperm; sperm motility; fertilisation; antigenic fragment.

The invention describes an isolated mammalian cystatin-8 (Zcys8)

polypeptide (I). (I) is useful for: inhibiting cancer procoagulant

protein in an individual and thus inhibiting the thrombotic events

casociated with cancer; promoting spermatogenesis, modulating seminal

fluid viscosity, enhancing viability of cryopreserved sperm, sperm

motility and fertilisation; and as antigenic peptides to generate

cantibodies. Zcys8 is useful as research reagent for characterising sites

of interaction between Zcys8 and its receptor. Zcys8 is useful in

cantibodies. Anti-(I) antibodies are useful to screen biological samples like

blood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chood, urine, saliva, tissue biopsy and autopsy material in vitro for the

chooly and a Zcys8 protein and DNA sequences that encode Zcys8 genes.

The polynucleotide encoding (I) is useful to detect and to localise the

cholynucleotide probes are useful in a useful for in vivo diagnosis. The

colynucleotide encoding (I) is useful in vivo diagnosis. The

chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene
                                                                                                                                                                                                                                                                       ö
oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zoyss gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zoyss gene. This sequence represents an antigenic fragment of human cystatin-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procosgulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                         Gaps

Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.

Claim 2; Page 95; 100pp; English.

The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting the thrombotic events protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigonic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large

Wey Estantion in an animal model of cerebrovascular beta-amyloidosis.";
Stroke 27:2080-2085(1996).
-I- FUNCTION: As an inhibitor of cysteine proteinases, this protein is thought to serve an important physiological role as a local regulator of this enzyme activity.
-I- SIMILARITY: Belongs to the cystatin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
